

Battery of STM32 Visual Tracking robot car use precautions:

The STM32 Visual Tracking car is powered by a 11.1V 3S model power lithium battery pack.

Charging method:

1. First, power on the charger. At this time, the three indicators turn from red to green, and the charger works normally.
2. Connect the battery pack to the 4Pin interface. At this time, all three indicators turn red and charge the battery.
3. When the three indicator lights turn green, the lithium battery pack is fully charged.
